

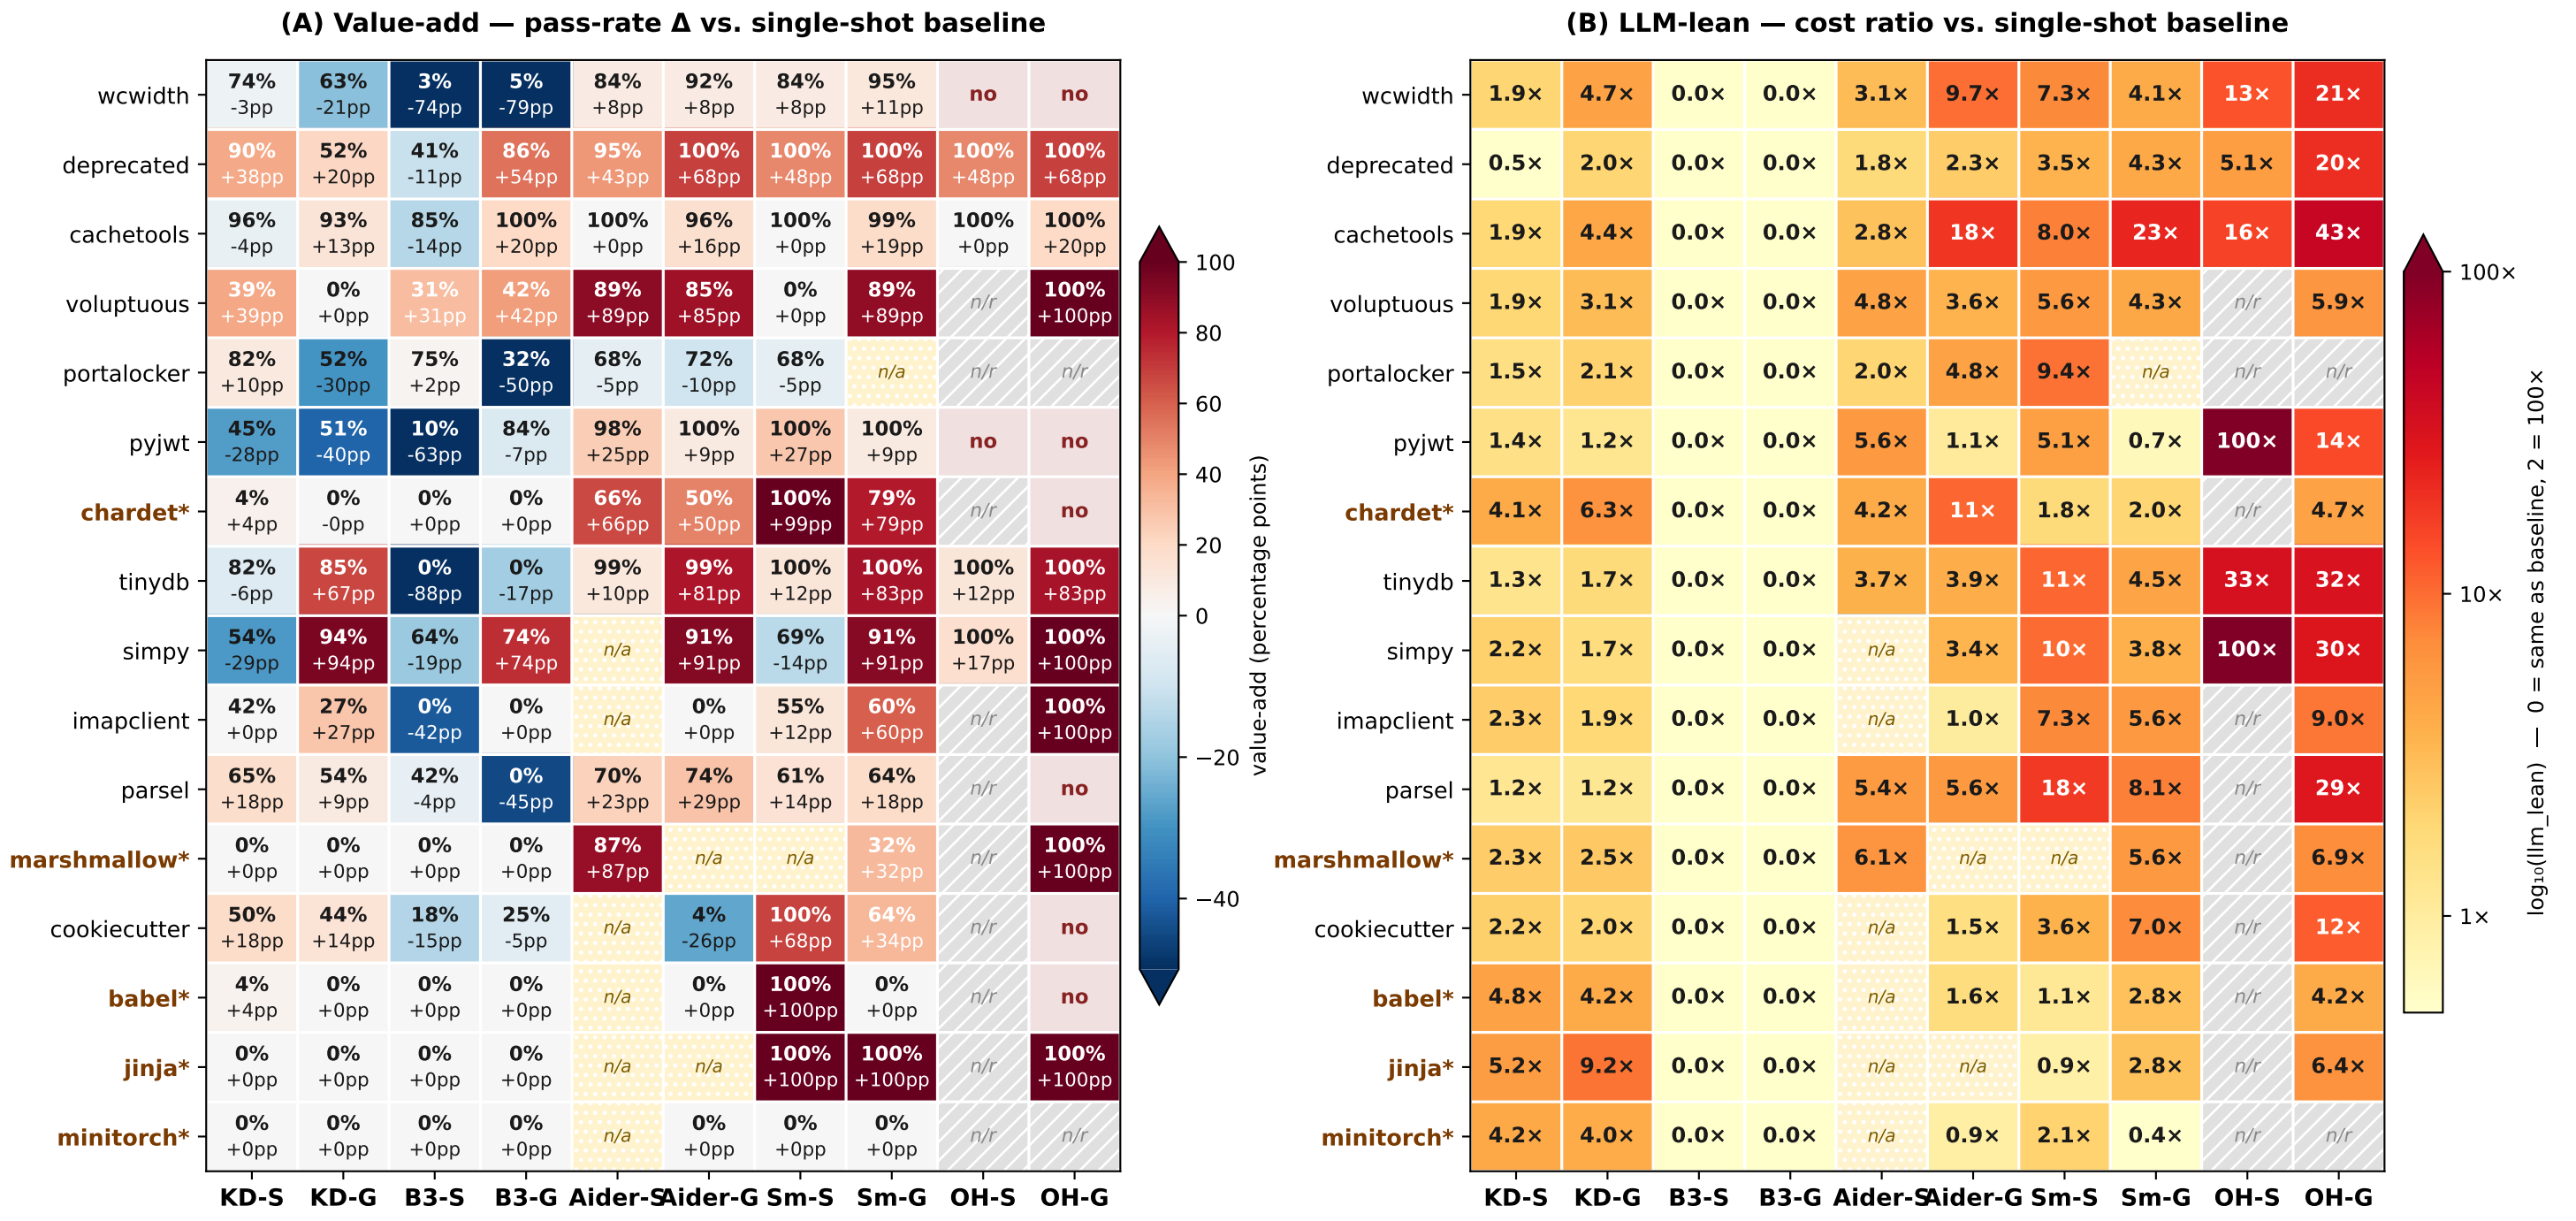

Figure 1 — Value-Add Fingerprint across (architecture × model × library) cells on commit0-lite

Floor libraries (* and bold row labels): collection or import-graph problems that block most architectures at 0%. Cells marked 'n/r' = not run (e.g., OH-Sonnet covered 6 of 16 libs). Cells marked 'no' = OpenHands ran but did not resolve. Cells marked 'n/a' (Aider-S) = not re-validated: 5 provider-limited cells, plus jinja (its repo context exceeds the model window). Aider/smolagents cells re-scored full-suite via commit0 test --branch (2026-06; corrects an earlier pytest -x denominator-truncation); the 3 re-validated Aider-S floor cells (chardet/marshmallow/voluptuous) use streaming (Anthropic 10-min non-streaming cap). See commit0/CORRECTIONS.md.
