

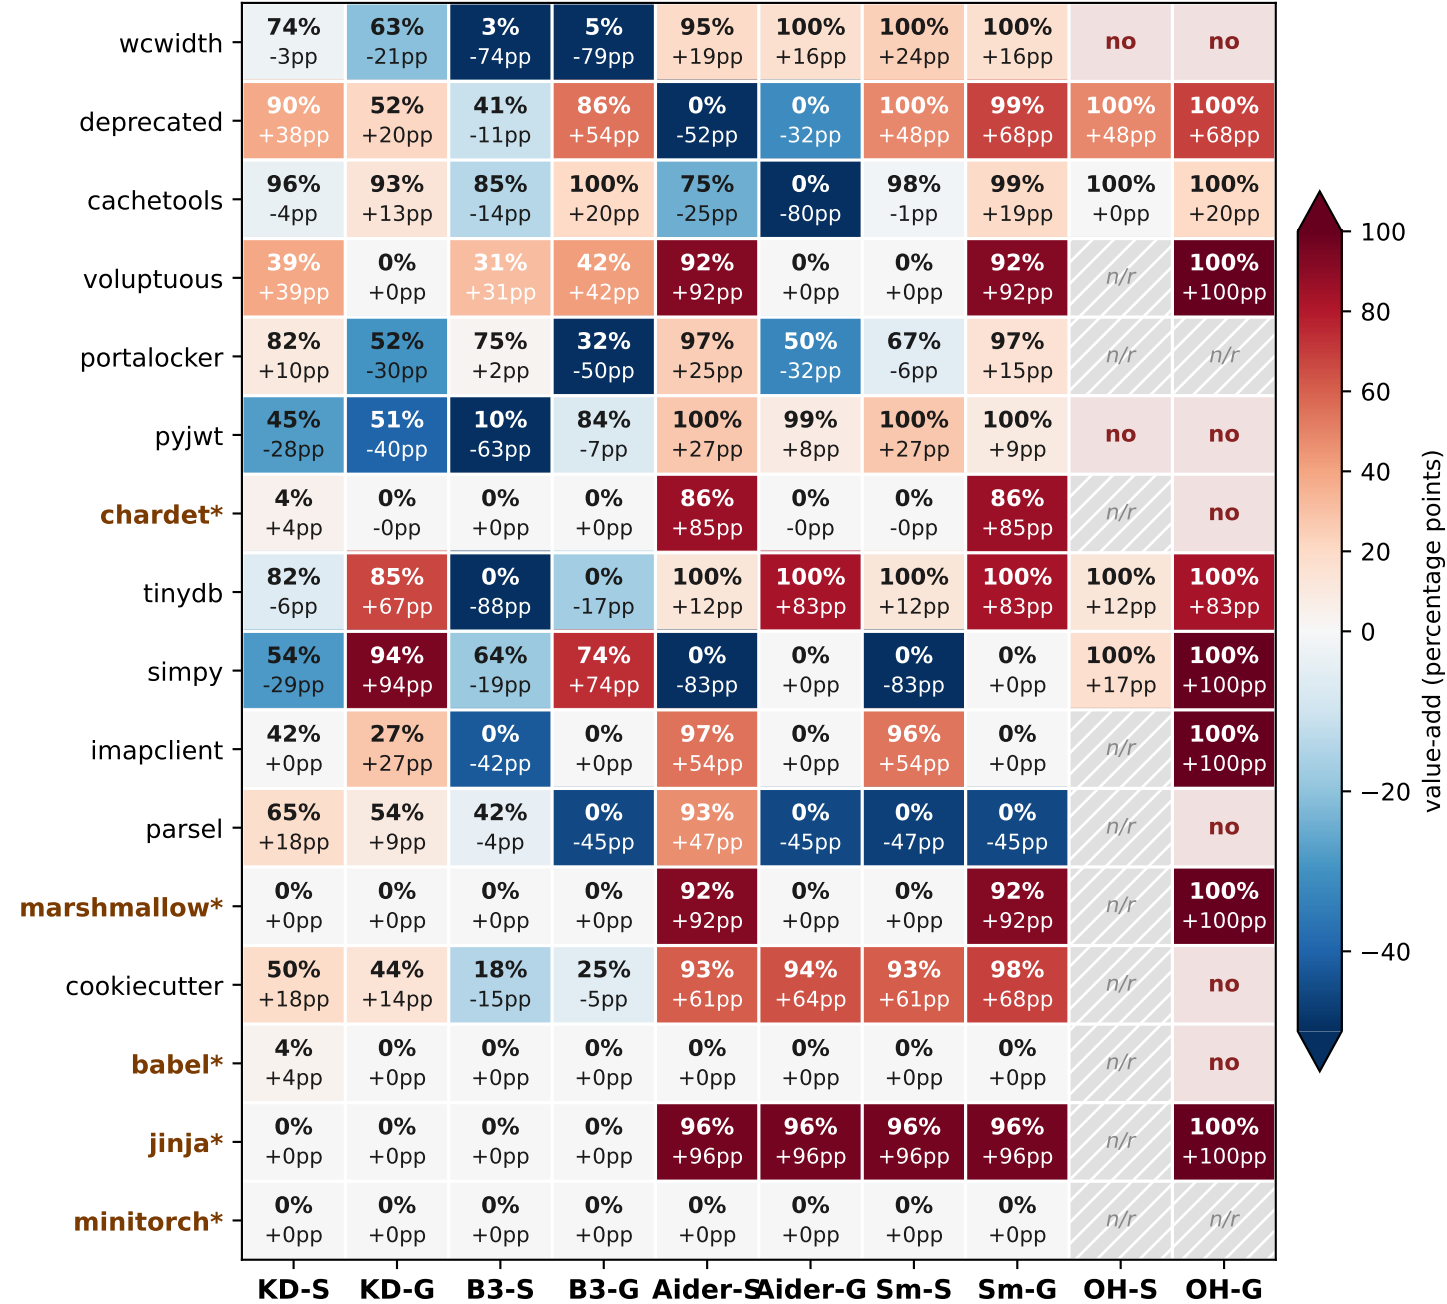

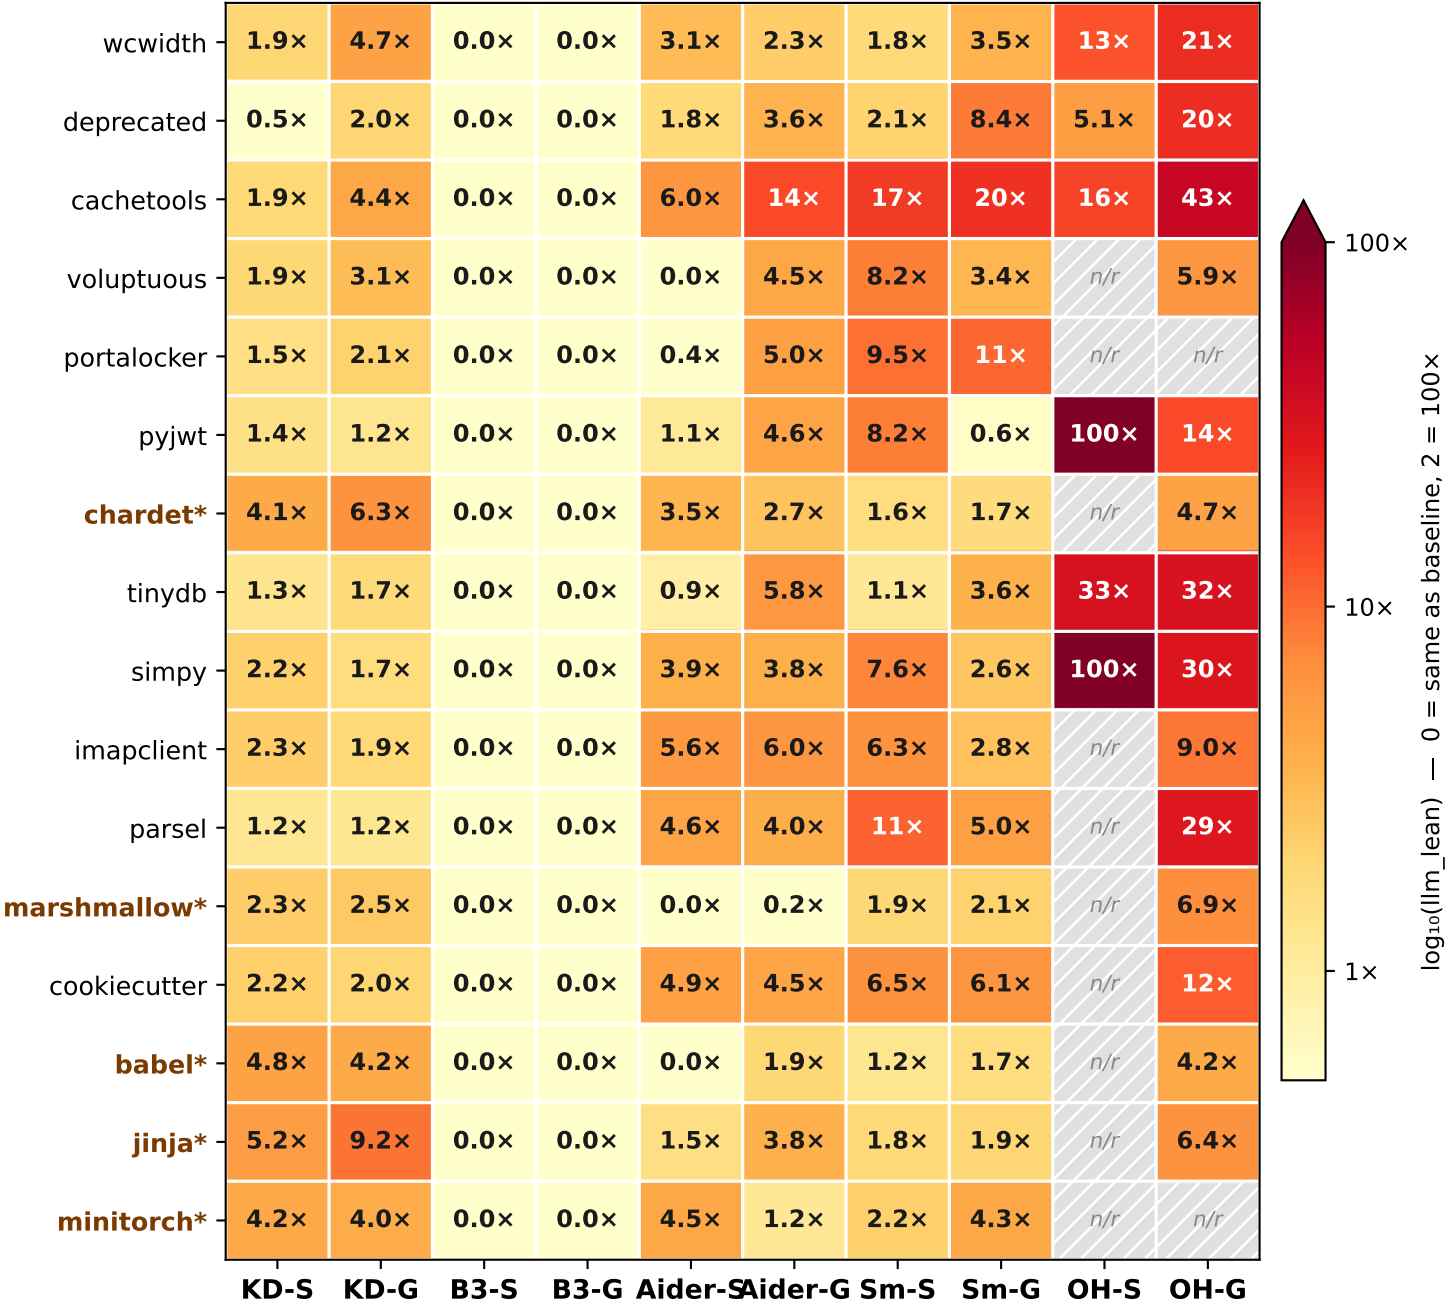

Figure 1 — Value-Add Fingerprint across (architecture × model × library) cells on commit0-lite

(A) Value-add — pass-rate Δ vs. single-shot baseline

(B) LLM-lean — cost ratio vs. single-shot baseline

Floor libraries (* and bold row labels): collection or import-graph problems that block most architectures at 0%. Cells marked 'n/r' = not run (e.g., OH-Sonnet covered 6 of 16 libs). Cells marked 'no' = OpenHands ran but did not resolve. Phase 1 columns Aider-S/G and Sm-S/G added 2026-05-05 (16-lib sweeps complete).
